

LNG Canada Project

ON-SITE MEDICAL FACILITIES

The LNG Canada Project has on-site medical facilities staffed by more than a dozen healthcare professionals and emergency response team members that are available to project workers 24-7. International SOS (ISOS), a global health and security services firm, operates the project's on-site medical clinics. ISOS is trained in COVID-19 safety and screening measures as well as care for patients with the virus.

Providing professional medical care at our worksite greatly reduces the need for off-site services.

ON-SITE RESOURCES INCLUDE:

2 
Nurse Practitioners

3 
Registered Nurses

3 
Medical Clinics

Virtual access to physician medical director 24/7

7 
Emergency Response Team members, **3** of which are Primary Care Paramedics

4 Advanced Care Paramedics, who provide around-the-clock medical services 

ISOLATION WINGS

Our workforce accommodation centres have isolation wings where any resident with symptoms or confirmed COVID-19 infection is housed and receives services and care in seclusion from the rest of the population.

Additional resources and equipment have been introduced to manage COVID-19 prevention and care.

THESE INCLUDE:

- On-site COVID-19 swabs for workers as directed by health authorities
- Increased supplies of medical grade oxygen
- Non-medical Personal Care Attendants to assist worker accommodation centre residents in isolation wings
- Increased staffing of medical professionals
